📄 Summary

Full Stack Developer with 3.8 years of experience building scalable and production-ready web applications using **Node.js, React.js, Angular, Python, and PostgreSQL**. Experienced in developing REST APIs, microservices, responsive frontends, authentication systems, and real-time applications. Strong hands-on experience with PostgreSQL and MongoDB, along with AWS, Docker, CI/CD, Kafka, and RabbitMQ. Experienced in designing scalable systems supporting 15,000+ users and 5,000+ daily transactions.

🏢 Experience

Software Engineer

Profilics Systems Pvt. Ltd.

01/2022 – 08/2025

- Developed and maintained full-stack web applications using **React.js, Node.js, Express.js, and PostgreSQL**.
- Built and integrated **RESTful APIs** for frontend-backend communication and business workflows.
- Developed reusable and responsive UI components using **React.js and TypeScript**.
- Worked with **PostgreSQL, MongoDB, and MySQL** for database integration, CRUD operations, and query optimization.
- Implemented **JWT authentication, authorization, and role-based access control (RBAC)**.
- Developed modular backend services with focus on clean architecture, maintainability, and performance.
- Worked on **CRM and file management applications**, implementing business workflows, user management, and file-related functionality.
- Used **Git, Docker, AWS, and CI/CD** for development, deployment, and application maintenance.

🎓 Education

Shri Guru Sandipani Institute of Technology

B.Tech in Computer Science

CGPA: 7.6

🧠 Technical Skills

Languages – JavaScript, TypeScript, Python

Frontend – React.js, Redux, Next.js, Angular, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend – Node.js, Express.js, Python, Django, Flask/FastAPI, REST APIs, Microservices, GraphQL

Databases – PostgreSQL, MongoDB, MySQL, Redis

Architecture & Concepts – REST, Microservices, OOP, DSA, System Design, Event-Driven Architecture, JWT, RBAC

Tools and cloud – AWS, Docker, CI/CD, Git, Kafka, RabbitMQ, Socket.io

📁 Projects

Enterprise Customer Relationship Management System

Angular, TypeScript, Python, PostgreSQL, REST APIs

- Developed a CRM application for managing customer information and business workflows.
- Built reusable and responsive UI components using Angular and TypeScript.
- Integrated REST APIs between the Angular frontend and backend services.
- Developed backend functionality using Python for application workflows and API operations.
- Worked with PostgreSQL for application data management.
- Implemented authentication, form validation, and user access controls.

AI-Powered Sales & Customer Relationship Management Platform

Next.js, React.js, Node.js, Express.js, PostgreSQL, Prisma ORM, Redis, WebSockets

- Developed a full-stack enterprise CRM platform for managing leads, contacts, sales activities, and customer workflows.
- Built reusable and responsive dashboards using React.js and Next.js.
- Designed and integrated RESTful APIs using Node.js and Express.js with PostgreSQL through Prisma ORM.
- Implemented JWT-based authentication and role-based access control (RBAC).
- Integrated Redis caching for frequently accessed application data and improved backend performance.
- Developed real-time notifications and application updates using WebSockets.

Enterprise Project & Workflow Management Platform

React.js, Node.js, Express.js, PostgreSQL, Kafka, AWS, Docker

- Developed a JIRA-like project management platform supporting projects, tasks, workspaces, and team collaboration.
- Built reusable React.js components with efficient state management.
- Developed REST APIs using Node.js and Express.js for user, task, project, and workspace management.
- Implemented JWT authentication and role-based access control.
- Integrated Kafka for event-driven communication and asynchronous processing.
- Worked with PostgreSQL for application data management and query optimization.
- Deployed containerized services using Docker and AWS.

Secure Document & File Management Platform

Angular, TypeScript, Python, PostgreSQL, REST APIs

- Developed a file and document management application for storing and managing business documents.
- Built Angular interfaces for file upload, browsing, search, and management.
- Developed Python backend APIs for file handling and metadata management.
- Used PostgreSQL for file metadata, user records, and related application data.
- Implemented authentication and permission-based access.
- Integrated frontend and backend services through REST APIs.
- Implemented file operations including upload, download, and deletion.

📜 Certificates

- Deep Agents with LangGraph – LangChain Academy
- 5-Day AI Agents Intensive Course with Google (Kaggle)
- End-to-End Machine Learning on Vertex AI
